

ABSTRACT

Inspired by new possibilities

Marie Haldorson

Statistics Sweden, Sweden

Keywords: Inspire, statistics

"The INSPIRE directive and its' national implementation make new sources of spatial information available to the NSI's. There is a need for development of new methods and perhaps a new awareness to make full use of different kinds of spatial data in the statistical production process. Statistics of higher quality as well as totally new statistics has come as a result of the Swedish geodata cooperation, which are the lessons learnt so far?"
