

ABSTRACT

Mobile statistics in Slovenia – first contact

Author 1: Igor Kuzma

Statistical Office of the Republic of Slovenia, Slovenia

Keywords: mobile statistics, georeferencing, statistical production process

Information created by mobile devices represents a great potential for improving the current or creating new official statistics. The Statistical Office of the Republic of Slovenia (SURS) decided to explore the possibility of including the data managed by the mobile operators into the statistical process. After establishing a legal basis for the action, a feasible plan was made in co-operation with the mobile operators. In 2014, SURS will establish the infrastructure that will support the storage and handling of larger volumes of the datasets and develop basic methods for their re-structuring to meet further statistical processing requirements. In the presentation the planned tasks will be described in detail together with the results expected after the first testing phase of the action. SURS's practical experience in communication and negotiations with the mobile operators will also be presented.
