

Nordic Forum for Geostatistics 2007

(paper/presentation):

**Margrete Steinnes, Statistics Norway: Shore zone statistics using 3D**

(Session 2)

*Statistics Norway does annually publish statistics on building activity along the shore line as well as a simple indicator on access to the shore line. We are currently working on supplementing the statistics with an indicator on accessible shore zone area. The presentation describes how we plan to obtain figures for this indicator and point out possible further work.*
