ESTP Course: Use of GIS in NSIs – Representing statistics on thematic maps, Kongsvinger, Norway, 5th to 7th of March, 2013

gvSIG – open source GIS SW

- **gvSIG Desktop**

    - GIS application designed for
        - capturing, storing, handling, analyzing and deploying **spatial data**.
        - local as well as remote data (for example WMS, WCS or WFS source).

- **gvSIG**
    - able to access the most common formats, both vector and raster data.
    - Common GIS tools
    - (query tools, layout creation, geoprocessing, networks, etc.), which turns gvSIG into the ideal tool for users working in the land realm.

Source: http://www.gvsig.org

Open Source

- ©gvSIG Association www.gvsig.org

- Open Source: under the GNU/GPL license, allowing free use, distribution, study and improvement.

- http://www.fsf.org/licensing/licenses/gpl.html

Exercises

- self study of the main logic and basic functions

Exercise 1 - Get to know the main logic of the gvSIG

Exercise 2 – Basics of View, adding spatial data and navigation

Exercise 3 – Symbology and using predefined symbology file

Exercise 4 – Attribute table, queries and statistics

Exercise 5 - Create Map and export image from a view

Let 's start

– Please empty your recycle bin

– copy the data and unzip to desktop

–Q:\kurs\Europeiske kurs -ESTP\ESTP GIS 2013\07software
