

***Interactive Map on Gender
Equality in Municipalities:
facilitating effective use of gender
statistics***

Gytis Straševičius, Chief Specialist

Main features

- The map is based on Esri ArcGIS
- 60 municipalities (lowest domain available)
- more than 40 indicators
- map is annually updated with the newest data and even more indicators

Why do we need it?

- For local administrations
- public administrations
- equality bodies
- civil society organizations
- media and the general population

The map is intended to

- Provide an easy and accessible tool for the society
- To compare gender equality indicators in different administrative units
- To promote effective use of gender statistics
- To contribute to evidence-based policy formation
