

## EFGS 2020 Webinar 20-21.10.2020 - Day 1 - issues discussed on chat

### Session 2

REUTER Hannes (ESTAT)

why are there no businesses in the rural areas? [*question to Selin Tekin's presentation*]

Dominique Laurent

Have you thought about using INSPIRE data on Buildings (if available)? It might be of interest as number of dwellings is a core attribute.

Paul Alexander, CSO, Census Geography, Ireland

(Thank you for the wonderful presentation! Interesting! In Ireland we would classify a "building" as the container and multiple "dwellings" inside! Please, how do you propose to deal with parcel which cross multiple grids?)

REUTER Hannes (ESTAT)

if a farmer does not apply for EU funding, the fields will not appear in LPIS.. how do you accommodate for that - e.g. if LPIS is empty?

REUTER Hannes (ESTAT)

implements the GSGF

jlOlarTEQ

To Serafín Ojeda from José Luis Olarte: Congratulation. In your last slide, do you show the quantity of dwellings per grid?... if so, how do you count?... i.e. do you add fractions of dwellings per grid cell?...

Paul Alexander, CSO, Census Geography, Ireland

For Črt Šuštar: really nice presentation thank you! :-)) please can you share the paper you mentioned? I would be interested to read! (paul.alexander@cso.ie) - do you issue any sample surveys as part of the agri. census?

AT\_NSI\_Ingrid Kaminger & colleagues

How exact was the method regarding your plausibility checks?

REUTER Hannes (ESTAT)

there is also work ongoing a) by DG DEFIS (EX GROWTH) on the usage of LPIS... several member states are also contributing b) DG AGRI on aggregation of LPIS data for policy purpose. Please check locally or contact me if you need more information.

IECA (Serafín Ojeda)

To Paul Alexander: We have carried out a process of geocoding the postal addresses of each real estate (ACAR, Andalusia Consolidated Address Register). The information of the real estate is transferred to the point and from the point to the cell

jlOlarTEQ

To Serafín Ojeda from José Luis Olarte: Could you share me your presentation?...

([josemanuel.olarte@inegi.org.mx](mailto:josemanuel.olarte@inegi.org.mx)).

Paul Alexander, CSO, Census Geography, Ireland  
@IECA (Serafín Ojeda) OK so centre point of the parcel determines which grid to count it in -  
Thank you / Gracias!

IECA (Serafín Ojeda)

To Dominique: If we use that Inspire building data in the Spanish cadastre, we will get a house equal to a real state.

REUTER Hannes (ESTAT)

@Lorraine Geohive - 20million generalised geometry of the boundaries - are you intending to provide higher resolution datasets to the public?

Jerker Moström

@Lorraine: Great presentation! The weak spot (in terms of data) in Sweden is the decentralised health care system. There are poor data-flows from municipalities and regions to government level. Did you already had these data-flows in place before the crisis?

IECA (Serafín Ojeda)

To Paul: For each parcel we search spatially all building entrances registered in ACAR

IECA (Serafín Ojeda)

To jOlarTEQ: For each parcel we search spatially all building entrances registered in ACAR. The information of the real estate is transferred to the building entrance (point) and from the point to the cell

Črt Šuštar

Some answers on Slovenian paper:

- 1) yes, full article can be shared, anyone interested please drop me an email on [crt.sustar@gov.si](mailto:crt.sustar@gov.si)  
Should answer also your question on plausibility and validation part
- 2) Yes, AC2020 is also supplemented by sample surveys
- 3) LPIS plots w/o subsidy is assigned to unutilised agricultural are
