

EFGS 2022 Conference

Towards standardised geospatial statistics

(Virtual, 27-28 October, 2022)

TITLE: Geospatial Data on data.europa.eu

AUTHOR(S): Antje Kügeler (con terra), conterra@conterra.de, <https://conterra.com>

ABSTRACT:

The strategic goal of data.europa.eu is to improve accessibility and promote the reuse of public sector information. The portal provides access to open data from international, EU, national, and regional sources. This is done by collecting the metadata of public data made available across Europe in a process called "harvesting". Metadata is harvested both from open data portal and geodata portals and made available on data.europa.eu. Open standards play an important role in this process.

It is an important feature of data.europa.eu to facilitate the discovery and access to open geospatial data sources. In the further development of data.europa.eu we strive to identify technological trends, i.e. recognizable tendencies or directions of development that might be worth further activities. In this talk we will share findings from a recently held webinar on emerging trends in the geospatial community, where it was discussed which trends, standards, or ideas could be relevant for data.europa.eu in the future.

KEYWORDS: Open Data, INSPIRE
